

Name: _____ Class: _____

Earth Movements

1. Where can you find the kind of rock formation on the photo ?
 - a. in the ocean
 - b. on a volcano
 - c. on fold mountains
 - d. in forest areas

2. On which plate is Canada located ?
 - a. the North American Plate
 - b. the African Plate
 - c. the South American plate
 - d. the Antarctic Plate
3. What are the different types of plate boundaries ?
 - a. convectional, rotational, convergent
 - b. longitudinal, horizontal, divergent
 - c. divergent, convergent, transform
 - d. long, short, medium

4. Study the diagrams and label the different types of plate boundaries.

5. Divergent plate boundaries are also called _____.
 - a. constructive plate boundaries
 - b. destructive plate boundary
 - c. islands
 - d. none of the above
6. What causes plates to move ?
 - a. strong winds blowing over the earth's surface
 - b. force of gravity on the earth
 - c. ocean currents
 - d. movement of molten rock within the mantle

1. Where can you find the kind of rock formation on the photo ?
